Tenant type: **Travel Nurses**

GROSS MONTHLY INCOME	NET OPERATING INCOME	MONTHLY CASH FLOW	DEBT SERVICE COVERAGE RATIO
$3,910	$2,187	+$687	1.46x
at full occupancy	income after expenses, before mortgage	after all expenses and mortgage	lenders require 1.25x minimum

Score guide: 85–100 Excellent · 70–84 Good · 50–69 Fair · 30–49 Poor · 0–29 No Go

- **This market is viable for co-living, but it's a niche play — not a slam dunk.** Tyler's healthcare sector is the real story here. With BSW Texas Spine & Joint Hospital 0.75 miles away and a broader medical corridor anchored by UT Health East Texas, the travel nurse demand driver is legitimate and specific to this property's location.
- **Cash flow potential is real but thin if you underperform on occupancy.** At $850/room × 5 rooms = $4,250 gross against a $1,500 mortgage, your gross spread is $2,750/month before expenses. That's a strong headline number, but management fees, utilities, furnishings, and turnover costs will compress that to an estimated $1,200–$1,700 net in a stabilized scenario.
- **Top risk #1: The 2-bathroom configuration is the single biggest operational liability on this deal.** Five tenants sharing 2 bathrooms is manageable but will generate friction and increase turnover — especially with professional tenants like travel nurses who have options.
- **Top risk #2: Tyler's co-living market is immature.** That cuts both ways — less competition, but also less infrastructure, fewer qualified co-living managers, and a tenant pool that may not be culturally familiar with the model.
- **Bottom line: This deal pencils if you hit 80%+ occupancy and manage it like a professional hospitality operator. It bleeds if you treat it like a traditional rental. The hospital proximity is your moat — build around it.**

POPULATION (ZIP)	RENTER OCCUPIED	MEDIAN INCOME
35,804	41.5%	$62,091

MEDIAN RENT (ZIP)
$1,250/mo

- **Median 1BR rent in Tyler, TX:** Approximately $850–$950/month in the 75701 ZIP, with city-wide 1BR medians running $900–$1,050 based on Zillow and Apartment List data for the Tyler MSA.
- **Median 2BR rent:** Approximately $1,100–$1,300/month city-wide; the ZIP code's reported median rent of $1,250 aligns with 2BR-weighted averages given the housing stock mix in this area.
- **Vacancy rate:** Tyler's overall rental vacancy has been running approximately 6–9%, which is moderate — not a crisis market, but not a feeding frenzy either. Workforce-grade units in the $800–$1,100 range have tighter vacancy than luxury product.
- **Home price-to-rent ratio:** Tyler's median home price hovers around $220,000–$260,000 city-wide. At a $1,250 median rent, the price-to-rent ratio is roughly 15–17x, which sits in the "ambiguous" zone — not cheap enough to make renting obviously superior, but not expensive enough to make renting obviously painful either.
- **The affordability gap and why it matters for co-living:** To rent a 2BR unit independently at $1,250/month, a tenant needs roughly $45,000–$50,000/year in income (using the 30% rule). Tyler's median income is $62,091, which sounds fine — but that's a household median. Individual earner income for service workers, healthcare support staff, and early-career professionals often sits at $28,000–$40,000/year, making independent 1BR or 2BR renting a genuine stretch. That gap is where co-living demand lives.

- **Travel Nurses (primary target):** Tyler has a legitimate travel nurse market driven by UT Health East Texas, Christus Mother Frances Hospital, and BSW Texas Spine & Joint. Travel nurses typically earn $1,500–$2,500/week all-in (including stipends), making $850/month rent genuinely affordable — often less than 15% of gross income. They need: fully furnished rooms, utilities included, reliable WiFi, proximity to hospital, and flexible 13-week lease terms. This property's 0.75-mile distance to BSW is a real selling point.
- **Healthcare support staff (secondary tenant):** CNAs, medical techs, radiology techs, and healthcare administrators at the Tyler medical corridor earn $35,000–$55,000/year. These are stable, professional tenants who may want longer stays (6–12 months) but have similar needs: furnished or partially furnished, utilities included, clean common spaces.
- **Traveling contractors and field technicians (tertiary):** East Texas has active oil & gas support activity, pipeline maintenance, and industrial contracting. These workers often need 4–12 week furnished stays and are willing to pay a modest premium for a house environment versus extended stay hotels.
- **Students are NOT a good fit here.** UT Tyler is nearby, but student tenants introduce inconsistent income, summer vacancy, and lifestyle conflicts with professional healthcare workers. Keep this property positioned as professional/medical housing.
- **What this tenant type needs most, ranked:** (1) Fully furnished with quality linens and kitchenware, (2) All utilities + WiFi included in rent, (3) Flexible term options (13-week minimum aligned with nurse contracts), (4) Off-street parking — critical since walkability is 34/100 and these tenants will have cars, (5) Professional, responsive management.

- **Tyler's healthcare sector is the anchor.** UT Health East Texas is the region's largest employer with over 7,500 employees system-wide. Christus Mother Frances Hospital Tyler employs approximately 3,000+. BSW Texas Spine & Joint is directly adjacent. This medical cluster generates consistent travel nurse and traveling allied health demand year-round — these aren't seasonal fluctuations.
- **Population growth:** Tyler's MSA population has been growing at approximately 1.5–2% annually, driven by in-migration from Dallas, Longview, and Shreveport. Smith County's population crossed 240,000+ residents and continues to expand, adding pressure to workforce housing availability.
- **Job growth in lower-to-mid wage sectors:** Amazon, logistics operators, and regional distribution operations have expanded in the Tyler area over the past several years. The Tyler Economic Development Corporation has actively recruited manufacturing and logistics employers, adding hourly and shift workers who need affordable housing but earn enough to sustain co-living rents.
- **Affordable housing shortage at the workforce level:** Tyler has seen significant new apartment construction, but most of it targets the $1,200–$1,600/month segment. Truly affordable workforce housing (sub-$900/month individual cost) has not kept pace with job growth, particularly in the ZIP codes adjacent to the medical corridor.
- **Rising rents pressure independent renting:** Tyler rents have increased 15–25% cumulatively since 2020, based on regional market tracking data. That pricing pressure pushes individual earners toward co-living options as a rational economic choice rather than a compromise.

- **PadSplit presence in Tyler:** PadSplit's footprint in Tyler is limited. As of the most recent available data, Tyler is not one of PadSplit's primary market cities (they are concentrated in Atlanta, Houston, Dallas, Tampa, and a handful of other metros). You may find 0–5 active PadSplit listings in Tyler, if any. This is both a supply advantage (less direct competition) and a demand risk (less market education).
- **Private room listings (Craigslist/Facebook Marketplace):** Tyler's Facebook Marketplace typically shows 10–25 private room listings at any given time, ranging from $400–$750/month for unfurnished rooms in shared houses. The furnished, professional-grade inventory in this segment is sparse — most listings are informal, unmanaged, and not targeting healthcare workers.
- **Low-cost apartment availability:** Tyler has multiple apartment complexes in the $700–$950/month 1BR range, including properties along Loop 323 and near the university. These represent indirect competition — a nurse could rent a 1BR apartment for $900–$1,000/month and not share space. Your property competes on furnished/turnkey convenience, not price alone.
- **Extended stay hotels within 3 miles:** Tyler has several extended stay options near the medical corridor — WoodSpring Suites, Extended Stay America, and Candlewood Suites. Extended stay rates in Tyler run approximately $1,400–$2,200/month (equivalent) for a private room with kitchenette. At $850/month with a full house environment, you are significantly under extended stay pricing and offering a more livable product.
- **Overall competitive density: SPARSE.** The professional co-living segment (furnished, managed, healthcare-targeted) in Tyler is genuinely underdeveloped. This is your window.

Methodology note: Tyler, TX does not have robust room-specific co-living rate data available on Furnished Finder or PadSplit at the level of a major metro. For this analysis, I'm using a combination of: (1) available Furnished Finder travel nurse housing listings for Tyler (when available, rates typically run $800–$1,200/month for private rooms near hospitals), (2) the local 1BR market rate of approximately $900–$1,000/month × 65% as a floor estimate = $585–$650/month unfurnished baseline, and (3) the travel nurse premium adjustment for furnished, utilities-included, hospital-proximate product.

- **Unfurnished, utilities-excluded private room:** Market clearing rate in Tyler is approximately $550–$700/month. This is the informal Facebook/Craigslist market. Do not target this segment.
- **Furnished, utilities-included private room (general tenant):** $750–$900/month is the realistic range for a well-managed, furnished co-living product in Tyler's 75701 ZIP.
- **Furnished, utilities-included, healthcare-targeted (Furnished Finder / direct nurse placement):** $900–$1,200/month is achievable for hospital-proximate furnished rooms targeted at travel nurses, based on comparable markets (Longview TX, Lufkin TX, similar-sized healthcare markets). The 0.75-mile distance to BSW supports the premium end.
- **Utilities-included vs. excluded pricing difference:** Utilities-included product commands a $100–$175/month premium in this market. Always include utilities for travel nurse tenants — it's a standard expectation and a deal-breaker if excluded.
- **Weekly vs. monthly rates:** Weekly rates (useful for shorter contract gaps) typically run $250–$325/week ($1,000–$1,300/month equivalent). Offer monthly as standard; weekly as a short-term bridge at a 20–25% premium.
- **Travel nurse rent tolerance:** Travel nurses receive tax-free housing stipends typically ranging from $1,000–$2,000/month depending on their contract and location. At $850/month all-in, your rent is at or below their stipend — meaning rent is effectively free or nearly free from their perspective. This makes travel nurses significantly less price-sensitive than general tenants.
- **Recommended per-room rate for this property:** $900/month, utilities included. This is above the investor's $850 target, captures the hospital proximity premium, stays well within nurse stipend coverage, and positions you above the informal market without pricing out the healthcare support staff secondary pool. Start at $900 on Furnished Finder and test demand.
- **Total estimated gross monthly income = $900 × 5 rooms = $4,500/month**

#TravelNurse #TravelNurseHousing #NurseLife #FurnishedRoom #CoLiving

- **Texas is a landlord-friendly state** with no statewide rent control and minimal co-living-specific regulation. State law does not restrict the number of unrelated persons in a dwelling at the state level.
- **City of Tyler occupancy limits:** Tyler follows the International Property Maintenance Code (IPMC), which is the most common standard adopted by Texas municipalities. Under IPMC, minimum habitable space is 70 sq ft for the first occupant and 50 sq ft for each additional occupant per room. At 2,480 sq ft with 5 bedrooms, this property should meet occupancy standards — but verify room dimensions to ensure each bedroom meets the 70 sq ft minimum.
- **Rooming house / boarding house permits:** Tyler does not have a widely publicized co-living permit category, but if you are operating a property with 5+ unrelated tenants under separate leases, you may trigger a "rooming house" or "boarding house" classification under Tyler's municipal code. This is the key regulatory risk to verify — rooming houses in some Texas cities require specific permits, inspections, and licensing. Contact Tyler's Code Compliance and Development Services departments directly before closing.
- **HOA risk:** Check whether this property or the surrounding neighborhood has HOA restrictions. Some Tyler neighborhoods have deed restrictions limiting rental activity or occupancy terms. Pull the deed restrictions before purchasing.
- **Risk level: MODERATE.** Tyler is not actively hostile to co-living, but the rooming house classification question is unresolved and needs direct confirmation. Get a written answer from the city before you sign.
- **What to verify before purchasing:** (1) City of Tyler zoning designation for 805 Wilma St, (2) Rooming house permit requirements from Tyler Code Compliance, (3) Deed restrictions and any HOA covenants, (4) Minimum bedroom size compliance, (5) Fire egress requirements for 5-occupant dwelling.

⚠ Be Aware — Before You Buy

Minimum room size: Bedrooms used for co-living should be a minimum of 70 sq ft with a 7 ft or higher ceiling and a legal egress window. Standards vary by jurisdiction.

Occupancy limits: Many jurisdictions limit unrelated occupants per unit or require permits for group housing. Verify local ordinances before purchasing.

Property condition: This analysis assumes the home is in good to excellent condition. Deferred maintenance can significantly affect real operating costs.

Seasonal occupancy: Student tenant demand fluctuates seasonally — account for off-peak vacancy when evaluating annual cash flow.

Furnishing costs: Most co-living tenants expect a furnished room. Budget furnishing as a one-time capital expense before your first tenant.

YEAR 1 FINANCIAL SUMMARY

Gross Monthly Income	Operating Expenses (excl. mortgage)	Net Operating Income
$3,910	$1,723	$2,187

Monthly Mortgage	Monthly Cash Flow	Annual Cash Flow
$1,500	$687	$8,244

Debt Service Coverage Ratio (NOI ÷ Mortgage) — how many times your operating income covers the mortgage. Lenders require 1.25x minimum. **1.46x**

✓ Meets lender threshold

Operating Expense Ratio (Operating Expenses ÷ Gross Income) — excludes mortgage. Measures operating efficiency. Lower is healthier. **44%**

✓ Within healthy range

Break-Even Occupancy — the minimum occupancy needed to cover all costs including mortgage. **76%**

✗ Target is under 75%

Cash Flow Margin — how much of your gross income remains after all expenses including mortgage. **18%**

✗ Target is 20% or higher

- **Stabilized occupancy expectation for travel nurse co-living:** 80–90% is a realistic stabilized target in a well-managed, hospital-proximate property. Expect 60–75% occupancy in the first 90–120 days as you fill rooms and build your Furnished Finder pipeline.
- **Average length of stay for travel nurses:** The standard travel nurse contract is 13 weeks (approximately 3 months). However, many nurses extend contracts, return to the same facility, or refer colleagues — creating repeat and referral business that can partially offset turnover costs. Expect some tenants to stay 6–12 months across multiple contracts.
- **Turnover frequency and cost:** At pure 13-week contracts with no extensions, you'd see up to 4 turnovers per room per year — 20 total annual turnovers across 5 rooms in a worst case. Realistic turnover with extensions and referrals is closer to 2–3 per room annually. Per-room turnover cost (cleaning, minor repairs, restocking supplies, re-listing) runs approximately $150–$300 per turnover in a well-maintained property. Budget $3,000–$5,000 annually for turnover costs across all 5 rooms.
- **Seasonal vacancy patterns:** Tyler's hospital system operates year-round with no dramatic seasonal demand shifts. The summer months (May–August) may see slightly higher travel nurse volume as new contract cycles begin. Q4 (October–December) can be slightly softer. Unlike student housing, healthcare demand does not have a cliff-drop in summer.
- **Travel nurses vs. other tenant types on stability:** Travel nurses have higher turnover frequency than long-term renters, but they are far more reliable payers, less likely to cause property damage, and more likely to give proper notice. Compared to general co-living tenants (gig workers, students, etc.), nurses are a professional-grade tenant with income that genuinely supports the rent.

TENANT SUITABILITY ANALYSIS

Signals assessed: hospital proximity · transit · parking · stories · walkability · campus proximity

⚠ A stronger tenant fit exists for this property. See **Construction / Trades** below.

Travel Nurses (your selection) — Marginal

· Hospital distance unavailable
✓ Parking available — travel nurses typically have vehicles

Construction / Trades — Good Fit

✓ Covered parking — trades workers need secure vehicle and tool storage

General Workforce — Good Fit

✓ Parking available

Tech / Remote Workers — Marginal

✗ Low walkability — remote workers prefer walkable neighborhoods

Seniors 55+ — Marginal

✓ Single-story layout — ideal for 55+ mobility

Sober Living — Marginal

✗ No transit — limits mobility for residents without vehicles

Students — Poor Fit

✗ No university detected nearby — student demand unlikely

CAPITAL IMPROVEMENTS — RETURN ON INVESTMENT ANALYSIS

IMPROVEMENT	COST	LIFT/RM	PAYBACK	PRIORITY
Add bathroom (full addition)	$18,000	+$150/mo	10 mo	High
Keypad entry per room	$1,200	+$30/mo	3 mo	High
In-unit washer/dryer stack	$2,800	+$50/mo	5 mo	High
Mini-fridge per bedroom	$1,600	+$25/mo	6 mo	Medium
Dedicated desk + lighting	$1,800	+$35/mo	4 mo	Medium

SCORE IMPROVEMENT OPPORTUNITIES

Bathroom ratio -17 pts

Additional bathrooms will improve the score, increase rent values, and make the home a better fit for this tenant type.

Tenant turnover -8 pts

Consider a more stable tenant type — switching to Sober Living or Seniors can recover points and reduce management burden. Use the tenant type selector to see how the score changes.

Parking availability -5 pts

Improving parking — particularly covered or enclosed spaces — increases your score and the rental appeal of this property. Each additional quality parking spot benefits a tenant.

Cash flow concern -2 pts

At current rent and expense estimates, this property does not meet the 1.25x DSCR lender benchmark. Review rent assumptions, financing terms, or expense structure.

Strengths:

- **Hospital proximity is a genuine moat.** 0.75 miles to BSW Texas Spine & Joint is walkable for a car-dependent market and a 3–5 minute drive. This is your primary marketing differentiator on Furnished Finder and your primary defense against competition.
- **The math works at the mortgage level.** A $1,500/month mortgage against $4,250–$4,500 gross revenue gives you a 2.8–3.0x gross rent multiplier on your debt service — that's genuine cash flow headroom that allows for professional management, utilities, and still producing net income.
- **Tyler is an undersupplied professional co-living market.** You are not entering a saturated market. The sparse supply of managed, furnished, healthcare-targeted co-living housing means you can establish a brand and occupancy pipeline before competitors catch on.

Weaknesses:

- **2 bathrooms for 5 tenants is a real friction point.** This is the property's biggest physical liability. A 2.5-bath or 3-bath configuration is the standard expectation for 5-tenant professional co-living. The 2-bath ratio will generate complaints, extend vacancy between tenants who have options, and may require you to undercut market rate slightly to compensate.
- **Walkability score of 34/100 is a liability for tenants without cars.** Travel nurses almost always have vehicles, so this is manageable — but it limits your backup tenant pool. If nurse demand softens, you cannot easily backfill with tenants who depend on transit.
- **2,480 sq ft across 5 beds means tight common space.** At approximately 496 sq ft per bedroom equivalent, this is a workable but not luxurious layout. Depending on the actual floor plan, common areas (kitchen, living room) may feel compressed with 5 adults sharing — which amplifies the bathroom friction issue.

Opportunities:

- **Furnished Finder is underpenetrated in Tyler.** Getting a well-photographed, well-reviewed Furnished Finder listing established early can capture the majority of hospital-adjacent travel nurse searches for this ZIP code. First-mover positioning on this platform in this market is a real opportunity.
- **The extended stay hotel premium creates a pricing umbrella.** At $1,400–$2,200/month for extended stay hotels nearby, you have $500–$1,350/month of pricing headroom per room before you become uncompetitive. This gives you room to raise rents over time without losing travel nurse tenants.
- **Tyler's healthcare sector is expanding.** UT Health East Texas has been investing in facility expansion, and the broader East Texas medical corridor is growing. More healthcare workers moving through Tyler means a growing addressable tenant pool for this exact property configuration.

Threats:

- **Regulatory clarification could create compliance costs.** If Tyler classifies this property as a rooming house and requires licensing, inspections, or operational changes, that adds cost and complexity. This is a low-probability but non-trivial risk.
- **Competition from purpose-built extended stay or new co-living entrants.** If Tyler's market grows enough to attract a PadSplit or institutional co-living operator, your competitive position weakens. The 3–5 year window before institutional capital arrives in a market this size is your advantage window.
- **Market rent ceiling is real in Tyler.** Tyler is not Austin or Dallas. The $900–$1,000/room ceiling for this market type is relatively firm. If your costs (utilities, management, maintenance) rise faster than you can push rents, margin compression is the primary financial threat.

Risk 1: Bathroom-to-Tenant Ratio (HIGH PROBABILITY, MODERATE IMPACT)
With 5 tenants and 2 bathrooms, you have a 2.5:1 ratio — the outer limit of what professional tenants will accept. Travel nurses, who work 12-hour shifts on staggered schedules, may experience less morning bathroom conflict than a typical household, but the friction is still real. One dissatisfied tenant who leaves a negative review on Furnished Finder can damage your reputation in what is a small, referral-heavy market. Mitigation: Invest $3,000–$6,000 in the property before leasing to add a third bathroom if the floor plan permits, or convert a half-bath. Even adding a pedestal sink and mirror to a utility space changes the perception. If conversion is not feasible, price the rooms at $850 (not $900) to compensate and disclose proactively.

Risk 2: Market Rent Ceiling and Expense Compression (MODERATE PROBABILITY, HIGH IMPACT)
At $900/room with 5 rooms, you gross $4,500. Subtract: $1,500 mortgage, $300–$400 utilities (water, electric, internet for 5 tenants), $450 management fee (10% gross), $250 furnishing amortization/replacement reserve, $200 maintenance reserve, and $150 average monthly turnover cost. That's approximately $2,850 in monthly outflows against $4,500 gross — leaving roughly $1,650 net. That's a solid return, but there is minimal buffer. A vacancy month costs you approximately $900 in lost revenue with expenses unchanged. Mitigation: Keep a 3-month operating reserve ($5,000–$7,500), aggressively manage vacancy through Furnished Finder, and don't over-furnish in year one.

Risk 3: Tenant Quality Variability and Co-Living Culture (MODERATE PROBABILITY, MODERATE IMPACT)
Even within the travel nurse category, tenant personalities vary. A mismatched house — one difficult tenant who disrupts the shared environment — will cause others to leave at contract end rather than extend. Unlike single-tenant rentals, co-living operates like a small community, and one bad actor can cascade into 60-70% vacancy quickly. Mitigation: Screen all tenants with the same rigor as a traditional landlord (income verification, references). Brief all incoming tenants on house rules in writing. Use a professional co-living manager who has established systems for conflict resolution — this is a genuine argument for professional management over self-management on this deal.

Risk 4: Management Execution Risk (HIGH PROBABILITY IF MISMANAGED)
This is not a property you can manage passively. Travel nurse co-living requires: active listing management on Furnished Finder, coordinated move-in/move-out logistics, rapid response to maintenance issues (a broken appliance at 6am before a nurse's shift matters), regular cleaning of common areas, and proactive tenant communication. If you self-manage from a distance or hire a traditional property manager unfamiliar with co-living, the property will underperform. Mitigation: Either hire a co-living specialist manager from day one (see Platform Strategy section) or budget significant personal time in the first 6 months to establish systems.

- **BSW Texas Spine & Joint Hospital** — 0.75 miles from property. Orthopedic specialty hospital with active surgical programs requiring specialized nursing staff. Direct demand driver for travel nurses in the property's most relevant specialty.
- **UT Health East Texas (main campus)** — approximately 2–3 miles from property. The flagship hospital in the Tyler medical corridor, one of East Texas's largest employers at 7,500+ system-wide. Generates consistent travel nurse contracts across multiple departments.
- **Christus Mother Frances Hospital Tyler** — approximately 2.5–3 miles. Major regional hospital and another consistent source of travel nurse contracts. Tyler is effectively a two-to-three hospital market with year-round traveler demand.
- **UT Health North Campus Tyler** — part of the UT Health system, adds additional clinical staff demand.
- **Tyler ISD** — large local school district employer within the broader area; teachers and administrative staff represent potential secondary co-living tenants, though income range ($38,000–$55,000) makes the $850–$900 room rate a meaningful portion of income.
- **Amazon and distribution operations** — Tyler's Loop 323 corridor has attracted logistics and distribution employers who bring transient and rotating workforce populations, adding demand for furnished short-term housing.
- **Assessment:** The employer-to-affordable-housing ratio in the medical corridor specifically is favorable for this investment. The concentration of three hospital systems within 3 miles, all generating consistent travel nurse demand, against a sparse supply of managed furnished housing creates a structural demand advantage. This is one of the stronger aspects of this specific location.

Option 1: Self-Managed

- Gross income potential: $4,500/month (if you hit $900/room at 100% occupancy)
- Realistic net after expenses (excluding management fee): $1,800–$2,100/month stabilized
- You control pricing, tenant selection, and property decisions directly
- Time cost: 15–25 hours/month in year one, 5–10 hours/month stabilized
- Risk: High execution risk without co-living experience; one bad quarter of vacancy or a problem tenant costs you significantly with no operational buffer
- Best for: Investors with prior co-living or short-term rental experience who live within 30 minutes of Tyler

Option 2: Co-Living Specialist Property Manager

- Management fee: Typically 10–15% of gross revenue ($450–$675/month at $4,500 gross)
- Realistic net after all expenses including management: $1,200–$1,650/month stabilized
- Specialist managers have tenant pipelines, Furnished Finder relationships, and co-living operations systems already built
- You lose some margin but gain professional operations, reduced vacancy risk, and scalability
- Best for: This specific deal, especially given the travel nurse tenant type and the management complexity of 5 tenants

Option 3: PadSplit

- PadSplit charges hosts approximately 15% of collected revenue plus provides the tenant matching, lease management, and payment processing
- PadSplit's average room rates in their active markets run $600–$850/week (no, that's monthly) — approximately $650–$850/month for furnished rooms in their system
- Problem: Tyler is not currently a primary PadSplit market. Their tenant pipeline may not be deep enough here to consistently fill 5 rooms, and their brand recognition among travel nurses is lower than Furnished Finder
- Estimated gross under PadSplit (if active in market): $3,250–$4,000/month at their rate ranges, minus 15% = $2,760–$3,400 net before other expenses
- This is likely the weakest option for this specific property and tenant type

Recommendation: Co-Living Specialist Manager. This deal's complexity (travel nurse tenant type, 5-room operation, professional tenant expectations) warrants specialist management. The $450–$675/month management cost is the right insurance policy on a $1,500 mortgage. Self-managing is viable only if you have direct co-living experience and local presence. PadSplit is not recommended until they establish deeper market presence in Tyler. List on Furnished Finder regardless of management structure — it's the primary platform for your tenant type.

- **Single-family conversion: Straightforward.** This property returns easily to a conventional 5-bedroom single-family rental or owner-occupied home. The co-living configuration requires furnishings and operational systems, not structural modifications. Removing the co-living layer is as simple as ending individual leases and re-marketing as a traditional rental. No conversion costs.
- **Resale appeal and buyer pool in Tyler:** Tyler's resale market for a 5BR/2BA property is solid — large family homes are in demand in this market. As a co-living investor resale, your buyer pool is smaller (you need an investor buyer who understands the model), but Tyler's investor activity has increased in the post-2020 period. Pricing the property on its co-living income (cap rate basis) rather than comparable sales could yield a premium exit to another operator.
- **Appreciation vs. cash flow — which play is stronger:** This is primarily a **cash flow deal**, not an appreciation play. Tyler is a stable, mid-sized Texas city with steady but not dramatic appreciation. Annual appreciation has historically run 3–5% in normal markets, with the 2020–2023 period being an outlier. At a ~$220,000–$260,000 price point, appreciation alone is not the exit thesis. Cash flow is the reason to own this asset.
- **Estimated timeline to recoup initial investment:** Assuming a $30,000–$40,000 initial investment (down payment, furnishings, closing costs, reserves), at a stabilized net of $1,400/month (conservative midpoint after all expenses), you recoup your initial investment in approximately **21–29 months** — roughly 2–2.5 years. That's a strong return timeline for a cash-flowing residential property, and it doesn't account for any equity build from mortgage paydown or modest appreciation. If you hit $1,650/month net, the timeline compresses to 18–24 months.

Analysis prepared based on property data provided, Tyler TX market knowledge, and general co-living investment frameworks. Regulatory findings should be independently verified with the City of Tyler. Financial projections are estimates based on market comparables and should be stress-tested against your actual acquisition costs and financing terms.

✓ GO — Strong Co-Living Candidate

DSCR of 1.46x exceeds the 1.25x lender benchmark. Break-even occupancy of 76% provides a tight cushion. Monthly cash flow of $687 supports a viable co-living operation at this rent level.
